## Hydrate Your Cells to Youth, Energy & Vitality

Youth, Energy and Vitality are achieved and maintained by hydrating your cells with the most true and simplest compound of the universe – water. The secondary, auxiliary and peripheral function of water (H<sub>2</sub>O) is to transfer minerals and nutrients to the cells of humans, animals and plants. The primary and most important function of water is to hydrate the cells of humans, animals and plants with the two chemical elements in water – Hydrogen and Oxygen. The key to proper hydration is that all of the water molecules are absorbed and assimilated into all of your cells.

As our civilization propels into the early 21st century there are numerous individuals, groups and corporations researching or selling water that promote the misconception that the primary function of water is to transfer minerals into the body. Also numerous individuals, groups and corporations have misdirected and muddled the primary function of water by over emphasizing the importance of the pH levels (acid or alkaline).

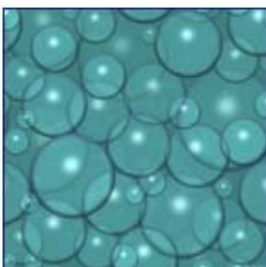

Persons believing or influenced by these illogical theories and directions about the primary function of water therefore mistakenly conclude that water with minerals or “clusters” and/or at a certain pH level provides optimum health, vitality anti-aging and release from diseases. These same individuals, groups and corporations do not understand the value and purpose of pure water with only the essential chemical elements of Hydrogen and Oxygen present in the liquid regardless of the pH level.

Today there are several myths and misconceptions about pure or distilled water that are based upon partial or half truths. And partial or half truth is no different from a lie. This website article provides the reader with important and complete details about various kinds of waters including pure or distilled water so the individual can make a more balanced and informed choice when choosing the proper drinking water for themselves and their families. This article also provides common sense on how to maintain proper energy levels for normal day to day and peak athletic performances.

### Nature's Distillation Process

Pure waters with only the chemical elements of Hydrogen and Oxygen are generated by the Earth's atmosphere every day. The weather components and dynamics of planet Earth provides a form of distillation by creating low temperatures and low heat on the Earth's surface that evaporates ground and sea water. As the evaporated water molecules accumulate in clouds, only the chemical elements of Hydrogen or Oxygen are gathered and levitated in the sky. Nature's primary method of providing water to plants, animals and humans is a low temperature distillation process. The precious and sterile airborne liquid vapours are transported by clouds and so the pure distilled water molecules can be deposited at sea and on land Any farmer growing agriculture crops prefers fresh, pure living and distilled rainwater to hydrate their crops rather than dead irrigation water.

The difference between the fresh pure rain water with acid pH and the irrigation water is that the rain water is composed of only Hydrogen and Oxygen and the molecules made from those chemical elements are structured in a coherent and organized manner. In contrast, the irrigation water with an acid or alkaline pH level is contaminated with other chemical elements and minerals and the molecules made from the chemical elements of the irrigation water are disorganized and moving in a chaotic manner.

### Surface Tension

When a raindrop falls on the hood of a car, the water does not break apart but remains together and spreads out. The molecules of the rainwater have the ability to adhere to themselves and remain together without dividing or beading up.

When liquids from an irrigation canal, a garden hose, a filter or an expensive bottled water are sprinkled onto the hood of a car, the waters break, divide and bead up. The molecules in an irrigation canal, a garden hose, a filter or an expensive bottled water do not have the ability to adhere to themselves therefore the water splits into smaller droplets.

- Website:  
www.trivortex.co.za

The rainwater on the car hood has the ability to be absorbed in the cells of human, animal and plant but the irrigation, garden hose, filtered and overpriced bottled waters beaded up on the car hood do not have the ability to be absorbed into all living cells. But why?

The ability, or non-ability, of water to have the structure, so molecules of the water can adhere to one another, is called surface tension. The surface tension of water can be measured by an instrument called a tensiometer that has a metal ring that is lowered and raised by gears and levers.

When the metal ring of the tensiometer is placed into fresh rainwater and then gradually pulled away from the rainwater, the metal ring quickly breaks away from the water. The metal ring breaks away from the rainwater because the molecular structure of the rainwater is coherent and organized, therefore the water does not cling, or hold on to, the metal ring. Because the metal ring of the tensiometer breaks away very quickly from the rainwater, the rainwater is determined to have low surface tension.

However, the chaotic molecules of the liquid from a spring, well, garden hose, an irrigation canal, a filter or from an expensive bottled water cling to the metal of a tensiometer therefore the ring breaks away slower and at a higher level. The spring, well, garden hose, irrigation, filtered and bottled waters are determined to have a high surface tension. And so logically what kind of water would provide maximum health benefits and vitality to plants, animals and humans? The simple yet profound answer to that question is fresh pure rainwater (alive) with organized molecules and definitely not mineralized spring, well, garden hose, irrigation, filtered or overpriced bottled water (dead) with molecular chaos.

When the metal of a tensiometer is placed into the liquids of any kind of plant and the digestive juices and blood of any human and animal, the ring breaks away at the same low level as fresh rainwater. The organized molecular structure of the liquids in any plant and in the digestive juices and blood of any human or animal are identical to fresh pure rainwater.

### **The Quality of Water is Indicated by the Taste**

A liquid with molecular chaos has a sharp and tingly after-bite to the human sense of taste, because the chaotic molecules of the liquid come in conflict and do not blend with the structured and organized liquids with coherent molecular structure surrounding the tongue and mouth. The tingly or sour after-bite of a liquid with molecular chaos, is the first form of information and defence to the individual.

But, regretfully, most humans are not aware that water with molecular chaos and holding chemical elements other than Hydrogen and Oxygen and having a tingly after-bite, will not be absorbed by the cells in their bodies but only sloughed off into vital organs and systems. The impure water with minerals and molecular chaos will be merely flushed out of the body. However, quite often not all of the unused and unwanted minerals are flushed out and will collect in the lymphatic system, kidneys and bladder therefore causing complications in those systems and organs.

A liquid with coherent molecular structure has a smooth and silky sensation to the human sense of taste, because the structured and coherent molecules in the liquid combine and blend effortlessly with the structured and organized molecules surrounding the tongue and mouth. The smooth, silky and flowing sensation of a liquid with a coherent molecular structure is the first and most important indication that partial, or total absorption, of the Hydrogen and Oxygen molecules of the liquid will occur. And this positive sensation is best translated in human verbal terms as "Oh that is wonderful and give me more!" And hopefully one day all humans will be aware of this critical non-verbal communication by the taste buds of our bodies.

Why does a wine that has been put on the shelf for period of time, taste better and have no tingly after-bite than an identical wine, that is consumed soon after the liquid has been separated from the grape pulp? Simple answer. The molecules in the aged wine are similar in structure to the molecules in the liquids surrounding the human tongue and mouth therefore the aged wine will have a smoother and silkier taste than the un-aged wine with molecular chaos.

## Freshly Squeezed Juices

Fresh squeezed juices from most fruits have a coherent molecular structure, but after a few hours the molecules of the liquid fruit degenerate to chaos and have a chaotic molecular structure. However, the juice from carrots has a coherent molecular structure, better than rainwater and has immediate absorption into the human cells. There have been countless anecdotal stories of individuals reversing diseases by drinking copious amounts of carrot juice.

The primary value of the fresh cut carrot juice for persons with health challenges and diseases, is that the coherent molecular structure of fresh cut carrot juice hydrates the cells that have been deprived of hydration and not had proper absorption of the Hydrogen and Oxygen light particles. The improper absorption of liquids consumed by the individual with the health challenge or disease was caused by the person drinking liquids with minerals and a chaotic molecular structure.

The minerals and vitamins in carrots provide only a secondary, auxiliary and peripheral benefit to the human cells in a health challenge, or in a diseased state. And for some individuals, drinking fresh cut carrot juice provides the only form of hydrating the cells, or hydrates the cells for the first time in numerous months, or years! And an important contributing cause of the health challenges or diseased states in humans is the lack of hydration to and the non absorption of Hydrogen and Oxygen light particles by the cells of their bodies.

However, the carrot juice degenerates to molecular chaos within 24 hours after the juice has been separated from the pulp. And the skin colour of some persons who have drank copious amounts of carrot juice turns to a dull orange. Vegetable and fruit juices need to be consumed within 2 to 24 hours after being separated from the pulp for maximum absorption by and benefit to the human cells. The proper duration of time for consuming fresh cut liquids depends upon the specific vegetable or fruit. And the ideal water is one that has the purity of rainwater and the coherent molecular structure of freshly cut carrot juice.

And Such A Valuable And Important Water Does Exist Today!

## Pure Water, Molecular Structure & Phosphorous

In the late 1990s, scientists discovered that a thin sheath of Phosphorous covers all cells of plants, animals and humans. A sheath of phosphorous also covers the entire nervous system of animals and humans. The DNA helix is composed of 99 percent Phosphorous and the critical chemical element in the mitochondria (energy battery) of an animal or human cell is Phosphorous.

When the chemical element of Phosphorous is separated from all other chemical elements and is in a pure form and exposed to a normal atmosphere, the Phosphorous makes a hissing sound and disappears. The highly energetic Phosphorous can only remain in this dimension by compounding with another chemical element. And these Phosphoric compounds envelop and are components for all plasma membranes of plant, animal and human cells. Numerous private and university microbiology laboratories are investigating the function and significance of the Phosphoric compounds in and enveloping every living cell.

The chemical element of Phosphorous absorbs and transmits light particles and we call that state Phosphorescent. Our whole existence and the human, animal and plant experiences are the transfer and movement of light particles via the Phosphorous located in key and critical locations in humans, animals and plants.

Based upon 15 years of investigation and discovery, this scientific researcher/inventor and author of this article feels and believes the Phosphoric sheaths covering all cells and the Phosphoric compounds in and around the plasma membranes of cells in plants, animals and humans function as chemical filters and regulators. The specific and moment to moment function of the Phosphoric chemical filter of each cell is to allow only the light particles (ions) in the chemical elements of Hydrogen and Oxygen to enter and hydrate (stimulate and organize) the other chemical elements in the cells. The Phosphorous sheaths also regulate the amount of light particles flowing in and out of the cells.

The pH level (acid or alkaline) of the light particles in the Hydrogen and Oxygen in water does not matter because as the Hydrogen and Oxygen is passed through the Phosphoric filter, the Hydrogen and Oxygen will be balanced so that the light particles of those chemical elements will work in harmony with the other chemical elements in the cell. The key and only characteristics the Phosphoric filter requires for full and complete passage and absorption into the cell is that other chemical elements (contaminants) are not present with the Hydrogen and Oxygen (purity) and the light particles in the Hydrogen and Oxygen have the proper or coherent molecular organization.

All human and animal cells are composed of the same simple chemical elements. For example, each cell of the human body has a Potassium/Sodium "pump" and the interaction of these two chemical elements must remain at a critical balance and level. The Phosphoric filter surrounding the cell will allow light particles of Potassium or Sodium to pass through into the cell only if the levels of the "pump" become unbalanced. If the "pump" is functioning properly then the Phosphoric filter around the cell will not allow light particles of Potassium and Sodium to pass through.

And when an individual consumes either Potassium, or Sodium, in a food or, in a dietary supplement, the excess Potassium or Sodium and all other chemical elements not absorbed by the cell must be flushed out of the body as soon as possible. Pure water with the proper molecular structure provides the maximum ability to flush out any excess chemical elements in the vascular system, capillaries and lymphatic system of the human body. Any water with additional chemical elements other than Hydrogen or Oxygen with chaotic or coherent molecular structure will be an inferior method of removing any excess chemical elements in the human body.

Minerals placed in bottled water and drank on a daily basis are most often rejected by the Phosphoric filters of the human cells because the Phosphoric filter will only allow light particles from chemical elements that are needed by the cell. The rejected chemical elements in the minerals and surrounding the human cells are basically useless and interfere with the primary purpose of water that is to hydrate the cell with properly structured Hydrogen and Oxygen.

And water with molecular chaos will deposit the unneeded minerals into the circulatory, capillary and lymphatic systems, kidneys, bladder and bowel. Is the cause for kidney stones the accumulation of minerals deposited by waters with a chaotic molecular structure?

## The Body's Ability to Create Coherent Molecular Structure

Bacteria in the human digestive system are geared to transform the molecular structure of liquids. An impure water with molecular chaos can assist the bacteria in the human digestive system to create coherent molecular in the impure water but if and only if the water has an alkaline pH level. If the drinking water has an acid pH level, the bacteria in the human digestive system have more difficulty creating coherent molecular structure in the drinking water.

Currently there are numerous devices on the world market today that change the pH level of tap water that is not pure and has minerals and other contaminants. However, if the water is purified like rainwater and has the proper coherent molecular structure equal to rain water then the water absorbs into the cells and does the most important task water is suppose to do - hydrate. And the pH of pure water with the proper coherent molecular structure can be acid or alkaline and the cell will still receive the most important function and benefit - hydration creates balance, harmony, increased energy levels and release of disease is provided.

However, when the plant, animal or human is under emotional, mental, physical stress, or the individual has had a period of inappropriate nutrition, the bacteria that creates coherent molecular structured liquids in the digestive system can be distorted or reduced in number or power. When the bacteria are distorted or reduced in number, or power, by stress factors, the absence or presence of alkaline water does not matter because the Phosphoric filters of the cells will minimize or not allow any kind of passage or absorption of the critical Hydrogen and Oxygen light particles because the molecular structure is not at the proper coherent level.

Also the bacteria level, to create coherent molecular structure of liquids in a normal 20 year old, is much higher than a normal 35 year old. And the bacteria level to create coherent molecular structure of liquids in a normal 35 year old, is much higher than a normal 60 year old. As a person ages, the value and importance of structured pure water increases dramatically. An individual over 35 years old needs to consume water with a coherent molecular structure because the bacteria level in the digestive tract that creates coherent molecular structure is at a much lower level than when the person was 20 years old.

www.trivortex.co.za

The Hydrogen and Oxygen light particles of water with any kind of contaminant (minerals) will be partially, or fully, rejected by the Phosphoric filter of any plant, animal or human cell regardless if the water is acid or alkaline. The rejected Hydrogen, Oxygen and other chemical contaminants must be flushed into the lymphatic system. The flushing and removal of the rejected chemical elements causes stress, aging and low energy for the plant, animal or human.

Tap or filtered water with an alkaline pH level assists the bacteria in plants, animals and humans to create coherent molecular structure. But the Phosphoric filters of plant, animal or human cells will only allow partial passage and absorption of the Hydrogen and Oxygen light particles of the alkaline water because of the presence of other chemical elements. Impure water with molecular chaos needs to be alkaline to assist the bacteria in plants, animals and humans to create coherent molecular structure of the water so absorption can take place.

### **Non-Chemical Technology That Creates Coherent Molecular Structure**

The Tri-Vortex Technology products create coherent molecular structure in any liquid to the same level as fresh cut carrot juice is available for purchase. The Tri-Vortex Technology products transform high or low temperature distilled water from being the very worst for the human body to the very best for the human body. Operating the Tri-Vortex Technology products are very simple. All one has to do to create the proper coherent molecular structure in any liquid with any kind of pH level or any amount of minerals or clusters is to place the container with the liquid on or adjacent to the Tri-Vortex Technology product for 10 to 30 seconds.

### **What You and Your Family can Drink Today**

Store bought distilled water in plastic bottles can be transformed into a very good source of hydration. The plastic containers for distilled are the cheapest kinds of plastic on the market and constantly degas or emit unwanted chemicals in the water. However, the chemicals are in a gas form and can be released from the distilled water. Readers are encouraged to purchase either one to five gallon glass or polycarbonate containers. Place the a Tri-Vortex Technology product under the glass or polycarbonate container. Pour in the store bought distilled and leave cap of glass or polycarbonate container for 24 hours so unwanted chemical evaporate from distilled water. When the reader and others drink water 24 hours after pouring distilled water into glass or polycarbonate containers, you and they will be amazed and impressed.

### **Low Temperature Distilled Water – The Water of the Future?**

Low temperature distilled water contains only the essential chemical elements of Hydrogen and Oxygen. When the molecular structure of low temperature distilled water is as coherent as fresh pure rainwater, or freshly cut carrot juice, the Phosphoric filters of all cells in plants, animals and humans allow and promote full and complete passage and absorption and the cells are properly hydrated.

In the late 1970s John Petrek of Escondido, California was contracted to assemble devices to make pure water for a corporation that constructed nuclear power plants. Petrek created a distillation system that duplicates nature by using low temperatures and low heat to evaporate the water. Normal distillation systems use high temperatures above the boiling point of water but the high heat causes the water to sputter therefore unwanted chemical elements are included in the final water distilled for drinking. The sputtering caused by the boiling temperatures in normal distillers makes processing sea water impossible. The low temperature distillation process without boiling water or sputtering purifies any kind of liquid including sea water, sewer water, grey water and liquids containing nuclear radioactive particles.

The low temperature distillation unit that is patented by Petrek and mimics and duplicates planet Earth's distillation process and system, only collects the Hydrogen/Oxygen molecules. Laboratory tests determined that any kind of water processed through and collected by the low temperature distillation system has virtually no other chemical elements except the precious chemical elements of Hydrogen and Oxygen identical to fresh pure rainwater.

As the purified water is processed through Petrek's low temperature distillation system, the molecular structure of the water is transformed to a level better than fresh cut carrot juice by a Tri-Vortex Technology product. The one-of-a-kind invention was discovered and by the author

- Website:  
www.trivortex.co.za

of this article and the Tri-Vortex Technology products can be applied to any liquid (wine, beer, water, juice, etc) to lower the surface tension and dramatically improve the taste and quality.

Countless person's including the author of this article have become very accustomed to the soft, silky taste of the Petrek pure water or store bought distilled water while using the Tri-Vortex Technology products. The author of this article and his family have been drinking the low temperature distilled water treated by the Tri-Vortex Technology products for over 10 years. Countless persons have been drinking the low temperature distilled water for over 15 years with no complications.

Mineral, spring, well and filtered waters having any pH level with molecular chaos have a tendency to dull the senses of smell and taste and deadens the nerve fibres in the digestive passages in the throat of an individual. Petrek's distilled water and store bought distilled water treated by the Tri-Vortex Technology stimulates the senses of smell and taste and enlivens the nerve fibres in the digestive passages in the throat.

About a month before this article was written the author of this article and his three family members tasted a sample of liquid that had been passed through a device that filters and raises the pH level of ordinary tap water. Immediately after drinking the filtered tap water with an alkaline pH level, all members of the family had a stinging and fire like sensation in the throat area. The very negative reaction by the author of this article and his family and countless other persons to the filtered water with a alkaline pH level was no different from the negative reaction when drinking ordinary tap water.

All persons drinking the low temperature distilled water or store bought distilled water and treated by the Tri-Vortex Technology have an intense reaction and sensitivity to any other waters with any amount of minerals and molecular chaos. The smell and taste sensations are enlivened and stimulated by Petrek's pure water or store bought distilled water that has been treated by the Tri-Vortex Technology.

"There is just no taste and satisfaction quite like drinking the low temperature distilled water or store bought distilled water treated by the Tri-Vortex Technology." states Dr. William Welles D.C., a long time and well known Chiropractor in Southern California. Dr. Welles and his wife have been drinking only low temperature distilled water treated by the Tri-Vortex Technology for over one year.

A commercial version of Petrek's low temperature distillation technology is available for purchase and produces a minimum of 80 gallons and maximum of 75,000,000 gallons per day at very low cost per gallon with no noise and with very simple operation and maintenance. The United States Navy and the Bechtel Corporation completed successful long-term and thorough studies and investigations into the one-of-a-kind low temperature distillations system that can operate in a what is called a co-generation system. Both electricity and pure water from any source including the sea can be efficiently produced in a co-generation system. Regretfully Petrek's consumer device producing five gallons per day is not yet available on the market place but fund raising is now taking place to make the technology available to the consumer.

## The Newborn Baby Needs Structure

Low or high temperature distilled waters that have molecular chaos are in need of organization like newborn babies. When disorganized distilled water comes in contact with the phosphoric filters of plant, animal and human cells, the phosphoric filters will pass chemical elements from inside the cell so organization can take place in the newborn distilled water. The distilled water that has leached the chemical elements from inside the cell via the Phosphoric filter is then flushed into the lymphatic system.

This dynamic exchange or leaching at the cellular level causes stress and the breakdown of critical functions in the cells. The acid, balanced or non alkaline pH level of distilled water has nothing do with any negative influences distilled water has on plant, animal or human cells. Low or high temperature distilled water is the very best (coherent molecular structure) or the very worst (molecular chaos) for plants, animals and humans.

One of the key chemical element compounds called magnetite functions like a guidance control or gyroscope in all plant, animal and human cells. Magnetite is composed of Iron and Oxygen and is probably one of the first components imbalanced or leached out of the cell through the phosphoric filter to organize the dead unstructured water around the cell that has any amount of minerals or is mineral free with molecular chaos.

Rainwater is the most pure and organized water on the planet and absorbs immediately into and hydrates plant, animal and human cells. Optimum health for the individual would logically be provided by waters that are close to the purity and structure of fresh rainwater. So what waters either in bottles or processed by mechanical devices and are available for purchase on the market today produce the purest water with the best coherent structure? And again, the key to maximum absorption and hydration of water into the cells is that water must have two (not just one) key properties.

If a water has purity but is disorganized then proper absorption and hydration will be hindered. And vice versa, if the water is impure but is organized the proper absorption and hydration will also be hindered. Purity and organization are the two interwoven and linking properties a water must have so the cells receive a maximum hydration level thus a person ages slower, has more energy and vitality and is less vulnerable to disease.

**CAUTION:**

There has been concern with the chemicals in Polycarbonate that possibly become unstable when exposed to high heat or acidic liquids.

Do not place polycarbonate containers in any dishwasher.  
Do not place polycarbonate in Sunlight, or sources of high heat, such as an oven.  
Do not place juices, alcohol, or acidic liquids, in polycarbonate

**Replace Polycarbonate containers every 12 months**

Following these simple steps should assure safe use of polycarbonate containers.

There have been no scientific studies or chemical testing results that have proven that waters contained in room, or slightly elevated temperature, polycarbonate bottles have any kind of harmful or foreign chemical elements.

If you want to eliminate any possibility of chemicals from any kind of plastic containers then strictly use glass or stainless steel containers.

**Related Articles:**

<http://www.ourstolenfuture.org/NewScience/oncompounds/bisphenola/2002-0515wetherill.htm>  
[http://www.plasticsinfo.org/media/polycarbrelease\\_5\\_99.html](http://www.plasticsinfo.org/media/polycarbrelease_5_99.html)

Below is a list of waters that allow the phosphoric transfer of the Hydrogen and Oxygen light particles into the cell. The number one water is the best method of light particle transfer and water number 12 is the worst method of light particle transfer. Note the two positions of low temperature distilled water. Filtered water includes a process marketed today as reverse osmosis or any filters that are attached to the pipes of homes or to the end of faucets. Filtered water is also water with "clusters" at room temperature. Water with chemical additives to lower surface tension have been excluded from this list because the author feels those products should be avoided under any circumstances:

1. Low temperature distilled water with coherent molecular structure.
2. High temperature distilled water with coherent molecular structure.
3. Filtered or bottled water in an alkaline state and coherent molecular structure.
4. Filtered or bottled water in an alkaline state and molecular chaos.
5. Filtered or bottled water in an acid state and coherent molecular structure.
6. Filtered or bottled water in an acid state and molecular chaos.
7. Tap water in an alkaline state and coherent molecular structure.
8. Tap water in an alkaline state and molecular chaos.
9. Tap water in an acid state and coherent molecular structure.
10. Tap water in an acid state and molecular chaos.
11. High temperature distilled water with molecular chaos.
12. Low temperature distilled water with a molecular chaos.

**Water Cleanse**

Recently a dentist in Florida was consuming one quart of mineral water per day sold in number 7 plastic containers and then doctors discovered a growing 8cm tumour on his pancreas. The pancreatic tumour had all the classic characteristics of being a cancerous growth when first discovered by the doctors. The dentist who had not used any kind of mercury in his dental practice for over 15 years had dark circles under his eyes and his body appeared wilted and weak.

- Physical:

- Website:  
www.trivortex.co.za

For 10 days the dentist ate healthy foods including tofu, did intense emotional and mental processing with therapists, family members and friends and drank a gallon per day of high temperature distilled water transferred to a glass bottle and treated by the Tri-Vortex Disk. The dentist was not prescribed any of the normal medications nor did he undergo any traditional medical therapies.

On the 11th day the doctor's skin colour was normal, the dark circles around his eyes were gone and his energy levels were normal to above average. A second examination of the tumour indicated the unwanted coagulating tissue had stopped growing and reduced in size. The dentist and his doctors were shocked after the tumour was surgically removed and the laboratory tests determined the tumour was non-cancerous.

Hardly any surgically removed pancreatic tumours are non-cancerous.

However, there is an unrealistic speculation, movement and thinking by numerous individuals and groups around the globe that somehow the compound of water or special kinds of water are saviours for persons with health challenges and/or cures for diseases such as cancer. The primary function and most important purpose of water is to hydrate the cells of plants, animals and humans. Any kind of water cannot be and will never be a quick or easy cure or answer for diseases.

Most often diseases are caused by the negative emotional, mental and physical states by, the poor diet consumed by and/or the environmental toxins exposed to the individual and any kind of water cannot negate or balance out those important influences. Drinking pure distilled water with coherent molecular structure is one key and excellent component of an overall disease prevention program that also includes the person emotionally, mentally and physically processing traumatic or negative feelings, thoughts or events, consuming a balanced nutritional diet, exercising and avoiding environmental toxins.

## Seaweeds – The Ultimate Liquid Nutrient

Many dry land regions around the world today were once underwater and growing all kinds of ocean seaweeds and vegetables. The chemical elements of the ocean seaweeds and vegetables dehydrated and remained in a solid form for thousands of years after the ocean waters disappeared. In the past 50 years, corporations have been mining and selling the dehydrated seaweeds and vegetables in powders, capsules and liquid drinks. The dehydrated sea products have minimal absorption for and maximum blockage to and impede hydration because the molecular structure of the dehydrated nutrients and the liquids accompanying the sea products are chaos.

But the same nutrients in the sea products are available with coherent molecular structure. The cold water oceans of the world are awash with fresh and alive seaweeds and vegetables such as aschophylm and bladderack. Both of these sea products have the most essential nutrients of any land or sea plant and the molecular structures of the entire seaweeds or vegetables have the same coherent molecular structure as rainwater and fresh cut carrot juice. And processed seaweeds or vegetables that are kept refrigerated for five years or more maintain their coherent molecular structure

Why should humans consume dehydrated sea products that are thousands of years old and have molecular chaos and are very difficult to absorb into the cells and tissues when superior and natural sea products are available in plentiful supply? The nutrients in fresh seaweeds and vegetables assimilate immediately into the cells if needed. And most importantly the unused and discarded water soluble nutrients in sea products are easily excreted out of the human body unlike dehydrated seaweeds sold as powders, capsules or in liquid drinks that are very difficult to eliminate from the body. And again our cellular distant relative called the plant indicates how cold water seaweeds are of value to the human body.

Extensive scientific studies have proven that one ounce of aschophylm seaweed spread out over one acre of farm land, increases the crop yield by 100 percent. Cold water seaweeds (excluding kelp) are the future of excellent human nutrition for day to day energy levels and to maximize athletic performance. Hopefully, one day corporations will be marketing and competing with one another like the fast food chains to sell their highly nutritional cold water seaweed vegetable products. When our species evolves to embrace and consume the bounty of water soluble nutrients with coherent molecular structure grown in the cold water oceans, doctors offices, hospitals and hospices will most likely be in a minimum need and usage and world hunger will be substantially reduced.

## Two Major Factors

Time Magazine stated in a November 25, 1996 article (pages 88-98) on health that the two major factors related to aging are digestion of food and elimination of waste. Communicating the importance of how the molecular structure of pure water, digestion and elimination of waste is related with aging and disease to baby boomers of the 1950s and their parents and children and grandchildren is at utmost priority.

Drinking low or high temperature pure distilled water with coherent molecular structure promotes the maximum level of digestion of food and the most efficient means of eliminating all wastes and unused minerals and chemical elements from the body. If the reader of this article cannot secure low (Petrek's unit) or high temperature (sold by grocery stores and bottlers) pure distilled water then the individual is encouraged to drink the liquid with the lowest number possible on the list printed in a previous paragraph.

Seaweeds are deficient in chemical elements such as iron and calcium. And the best source for essential chemical elements such as calcium, iron and potassium is in a liquid form so the excess chemical elements not used by the cells are immediately flushed out of the body. Blackstrap molasses that contains most of the essential chemical elements for cellular function and balance is available for purchase in any health food store at a very reasonable price.

The biological cells in humans, animals and plants are the most awesome and fantastic life forms in the universe. We have the opportunity of keeping our cells in an awesome, fantastic, youthful, energetic and vital state by a balanced diet that includes seaweeds, blackstrap molasses and vegetables, personal awareness and processing, exercise and nourishing our cells with pure distilled water in a molecular coherent state.

As an individual commits to and continues personal emotional processing with physical exercise and consumes the natural combination of low temperature distilled water with a coherent molecular structure, seaweeds and blackstrap molasses their quality life span and cellular dynamics and functions will be extended by 15 to 40 years.

**Note from the Author:**

On two different days in the summer of 1998, Brian David Andersen was a guest on the Roger Hedgecock Radio Show. Brian's first appearance detailed and demonstrated the abilities of the Tri-Vortex Technology. During his second session with Roger, a mixture of Hedgecock's urine and water from the polluted Mission Bay of San Diego was processed through Petrek's low temperature distillation unit.

Andersen then drank the distilled water made from the contaminated concoction while on the air with Roger. After drinking the purified water, Andersen had no complications and the water processed through his body no different from normal drinking water. (Tapes of the radio programs are available upon request.)
